

COURSE OVERVIEW

A basic and advanced interactive course about 4D echocardiography using GE and Philips scanners, and TomTec workstations to foster the implementation of 4D echocardiography imaging in the daily routine of the echo labs.

This course includes live scanning sessions with models and expert guided hands-on sessions on workstations.

WHO SHOULD YOU ATTEND

This activity is designed for cardiologists, cardiac surgeons, interventional cardiologists, anesthesiologists, sonographers, who require advanced training in 4D TTE and 4D TEE, and for those who want to understand the added value of 4D echocardiography to understand the anatomy and pathophysiology in various heart diseases and guide surgical and interventional procedures.

LEARNING OBJECTIVES

Upon completion of this program, participants will be better able to:

- Understand the added value of 4D echocardiography to assess the anatomy and the pathophysiology of the various heart diseases and be able to incorporate its use in the daily practice of the echo lab
- Integrate 4D echocardiography information in the clinical decision making
- Assess cardiac chamber geometry and function using 4D echocardiography
- Use 4D echocardiography to perform quantitative analysis of heart valve morphology and function
- Define the most important clinical uses of 4D TTE and TEE
- Understand the role of 4D echocardiography in structural heart disease interventions
- Recognize the role of 4D echocardiography to assess the most common congenital heart defects
